

## Pixley Irrigation District Water Supply Notices

**April 14, 2025**

Late February and the month of March brought enough storms to get us a nearly average water supply for the second year in a row. The Bureau of Reclamation allocation for our Friant supply rose from 45% Class 1 in late February to 100% Class 1 by the end of March. This, coupled with our Tule River supply, will result in approximately 6-8 weeks of water this summer for Lower Tule. As of now, the plans are to start the run in mid June. The price will be \$50/acre-foot. The allocation will be determined as we get closer to the run and have a more refined water supply amount. It currently looks like it will be approximately 0.60 acre feet per acre.

For Pixley, we are working diligently to see if there are opportunities to purchase water for a small summer run.

We will send updates as things change and the summer gets closer. As always call the office with any questions.

Sincerely,

Eric Limas

General Manager
